Abstract

This report includes a table of 339 sites representing mineral activities for mining and mineral exploration in the State of Washington from 1985 through 1997. The table was primarily compiled from annual reports in Washington Geologic Newsletter and Washington Geology. The information was compiled for use in a weights-of-evidence analysis of mineral resources in northeastern Washington.

Introduction

The Washington Department of Natural Resources, Division of Geology and Earth Resources, annually reports mining, development, and mineral exploration activities in the state. The majority of this information is obtained from a voluntary questionnaire survey of mining companies and individuals, published information, and inquiries of public officials. Because not all questionnaires were returned, the annual reports were an incomplete measure of Washington state mining activities. These results were published annually in the Washington Geologic Newsletter for years through 1990 and in Washington Geology in 1991 and afterward.

A table ([Appendix II](#)) was compiled for the period 1985 through 1997 (Derkey, R.E., [1995](#), [1996](#), [1997](#), [1998](#), Derkey, R.E. and Gulick, C.W, [1992](#), [1994](#), Derkey, R.E., Gulick, C.W and Lingley, W.S., [1993](#), Gulick, C.W. and Lingley, W.S., [1993](#), Joseph, N.L., [1986](#), [1987](#), [1988](#), [1989](#), [1990](#), [1991](#)) from these annual reports. The data were used in a weights-of-evidence spatial analysis of mineral resources and exploration activity in northeastern Washington (unpublished data). [Figure 1](#) shows the location of 339 exploration or mining sites in Washington for the years 1985 through 1997

Description of data

Washington mineral industry surveys indicate the sites of mining, development, and exploration for metallic or industrial commodities. The table includes the commodities or deposit types as follows: barite, clay, coal (sub-bituminous), copper, crystals, diatomite, dolomite, gold, gold (+/- silver) placer, gypsum or gyspite, lead, limestone, magnesium, marble, molybdenum, nickel, olivine, peat, rock or stone, sandstone, shale, silica, silver, talc or soapstone, uranium, and zinc. Commodities of common variety minerals—stone, rock, etc.—may be included but this compilation cannot be considered complete for such commodities. For each of the 339 sites, the following data ([Appendix](#)) are provided:

property name, location by township-range-section, latitude, longitude, county, first commodity, all commodities,

operator/owner, deposit setting, activity for each year from 1985 to 1997, and activity type for each year from 1985 to 1997.

Township, range, and section(s) given in "location" are those cited from the references. Latitude and longitude were provided by Washington Department of Natural Resources, Division of Geology and Earth Resources for some sites. For other sites, latitude and longitude were calculated from section, township, range and meridian. This was done by arbitrarily selecting a section (assumed section) that occupied the approximate central part of the property. The calculation method uses the freeware script, 'TRS2LL' (M. Wefald, written commun. 1998). The resulting latitude and longitude refer to a point in the center of the assumed section.

If activity was recorded on a site during 1997, "Activity 1997" was answered "yes" and a description was provided in "Activity type, 1997". The same procedure was followed for other years. Years with activity answered "yes" ranged from a low of 61 sites in 1987 to a high of 144 sites in 1991.

How to obtain digital data

Five files are included on the diskette:

<u>Name</u>	<u>Explanation</u>
• readme	Explains how the digital data is organized
• tx00-014.doc (MS Word 97)	Text of report, figure 1 ,
and metadata	
• me00-014.txt (text)	Appendix I (metadata)
• ta00-014.xls (MS Excel 97)	Appendix II (table)
• fi00-014.jpg (JPEG picture)	Figure 1

Metadata gives further details about the data and are described in [Appendix I](#) of the report.

The complete digital files are available from the USGS.

To obtain copies of the digital data from the Internet, do one of the following:

1. Download the digital files from the USGS public access World Wide Web site on the Internet: URL =
<http://geopubs.wr.usgs.gov/open-file/of00-014/>

The Internet sites contain one self-extracting zipped file. To expand this file, use the Run command in Windows (95, 98, and NT) or type the file name and hit enter at the DOS prompt.

The report and data may also be available on diskette from USGS Open-File Services, Denver, Colorado.

Description:

Abstract:

This report is a tabular presentation of mineral activities for mining and exploration in Washington during 1985 to 1997. The data may be incomplete as it depended on published data or data volunteered by operators.

Purpose:

This dataset was developed to provide mineral resource data for the region of northeast WA for use in future spatial analysis by a variety of users.

This database is not meant to be used or displayed at any scale larger than 1:24,000

Geologic datasets for weights of evidence
analysis in northeast Washington--4.
Mineral industry activity in Washington, 1985-1997
The data consists of one worksheet in the Excel 97 file,
with fields described as follows:

Property name--Name of site, property or project

Location--Location of site by township, range, and section

Township--Township used in calculating the latitude and longitude,
unused, but occupied township(s) in parentheses (hidden).

Range--Range used in calculating the latitude and longitude.
unused, but occupied range(s)in parentheses (hidden).

Section--Sections occupied in given township(s) (hidden).

Assumed section--A section assumed as the center of the site.
The center of this section is the location used in calculating
the latitude and longitude of the center of the site.

Latitude--Location in decimal degrees of latitude of center of the site

Longitude--Location in decimal degrees of longitude of center of the site

County--Name of county in Washington

First commodity--Name of the first commodity or deposit type listed

All commodities--List of all commodities of interest at site

Operator/Owner--Name of owner or operator

Deposit setting or type--Name of the deposit type, or if unavailable,
the type of geologic setting at the site

Activity, 1997--Indicates if activity occurred at the site in 1997.
This is answered "Yes" or left blank if no activity was recorded.

Activity type, 1997--Nature of activity during 1997.

For years 1996 back to 1985, the "Activity, 19xx" and "Activity type,
19xx"
are provided for the respective year.

**Appendix II--Table of mineral industry activity in Washington,
1985 to 1997.**

Explanation of fields in table.

The data consists of one worksheet in the Excel 97 file, with fields described as follows:

Property name--Name of site, property or project
Location--Location of site by township, range, and section
Latitude--Location in decimal degrees of latitude of center of the site
Longitude--Location in decimal degrees of longitude of center of the site
County--Name of county in Washington
First commodity--Name of the first commodity or deposit type listed
All commodities--List of all commodities of interest at site
Operator/Owner--Name of owner or operator
Deposit setting or type--Name of the deposit type, or if unavailable, the type of geologic setting at the site
Activity, 1997--Indicates if activity occurred at the site in 1997. This is answered "Yes" or left blank if no activity was recorded.
Activity type, 1997--Nature of activity during 1997.
For years 1985 to 1996, the Activity, 19xx and Activity type, 19xx, are provided for each year respectively.

Hidden columns:

Township, Range, Section--Legal land description used to calculate longitude and latitude
